

Welcome to The Pharmacy Management System!

Enter something:

Requirements

1. The user must be able to browse through types of over-the-counter drugs and search for specific over-the-counter drugs. They must then be able to select a drug to order or to view information about. (drug information tracking, order taking)

Test Case Name: Search for Over-the-Counter Drugs

Objective: To verify that drugs can be searched for

Action: In the browsing page, enter the name of an over-the-counter drug in the search bar and press enter to search.

Assert: Check that the drug with the matching name shows up in the search results.

Test Case Name: Verify no search for prescription drugs

Objective: To ensure that prescription drugs cannot be searched for.

Action: In the browsing page, enter the name of a prescription drug in the search bar and press enter to search.

Assert: Check that the prescription drug with the matching name has not shown up in the search results.

2. Drugs can be added to the cart. (order taking)

Test Case Name: Add Drug to Cart

Objective: To verify that users can add drugs to the cart.

Action: In the browsing page, click the + icon next to a drug.

Assert: Check that the drug has been added to the cart.

3. A customer can only add a drug to their cart if there is at least as much of the product that they want to order in stock. (order taking)

Test Case Name: Prevent purchase of out of stock drugs

Objective: To verify that users cannot purchase drugs that are out of stock

Action: In the browsing page, click the + icon next to a drug that is out of stock.

Assert: Check that the drug has not been added to the cart and a popup is produced informing the customer that the drug is out of stock.

4. **A customer must provide a prescription number if they want to order prescription drugs. The patient will be able to add the corresponding prescription drug to their cart upon entering a prescription number. (order taking)**

Test Case Name: Provide Prescription Number

Objective: To verify that a prescription drug can be purchased with an appropriate prescription number.

Action: In the browsing page, input a valid prescription number into the "Enter Prescription Number" text box, then click the "Confirm" button.

Assert: Check that the appropriate prescription drug has appeared to be added to the cart.

5. **When a customer places an order, the inventory number updates to reflect that. (order taking, inventory monitoring)**

Test Case Name: Cannot Order Out of Stock Drugs

Objective: To verify that the system denies an order if there is no inventory.

Action: User tries to check out.

Assert: Check that there is enough inventory for the order, deny the order if there is not enough inventory.

Test Case Name: Inventory Decreases When Order Placed

Objective: To verify that the inventory system maintains an accurate count of drugs.

Action: Try to check out from the cart.

Assert: If a user orders N drugs, the inventory for the respective drug decreases by N.

6. **Immediately after an order is placed, the customer must receive an email confirming that their order was placed.**

Test Case Name: Verify Email System Sends Confirmation

Objective: To verify that the system sends customers a confirmation email when an order is placed.

Action: Check out an order, leaving a valid contact email in customer details.

Assert: That the email system sends an order confirmation message to the email the customer inputted.

7. **Customers will be able to order prescription drugs for pickup, and will be able to order over-the-counter drugs for pickup or delivery. (order taking)**

Test Case Name: Order over-the-counter drug for pickup

Objective: Ensure that over-the-counter drugs can be ordered for pickup

Action: Check out an order that contains at least one over-the-counter drug, and select the "Pickup" option.

Assert: The order is placed, and a confirmation email is sent indicating that the drug is for pickup.

Test Case Name: Order over-the-counter drug for delivery

Objective: Ensure that over-the-counter drugs can be ordered for delivery

Action: Check out an order that contains at least one over-the-counter drug and no prescription drugs, and select the "Delivery" Option, then specify an address for delivery.

Assert: The order is placed, and a confirmation email is sent indicating that the drug is being delivered to the specified address

Test Case Name: Prevent order prescription drugs for delivery

Objective: Ensure that prescription drugs cannot be ordered for delivery

Action: Check out an order that contains at least one prescription drug.

Assert: There is no option to have the order delivered, the order can only be picked up at a store.

8. **Immediately after an order is placed, the customer should be given an estimated time until the order is delivered/ready for pickup, with a notification given out when the order is delivered/ready for pickup.**

Test Case Name: Email System Sends Time Estimate

Objective: To verify that when the email system sends customers a confirmation email, it includes an estimated pickup time if the order was for pickup, or an estimated delivery time if the order was to be delivered.

Action: Check out an order, leaving a valid contact email in customer details.

Assert: That the order confirmation email sent includes an estimated time.

Test Case Name: Email System Sends Pickup Notification

Objective: To verify that the system sends customers a notification email to pickup an order when a pickup order is ready.

Action: A pickup order is marked ready for pickup in the system on the pharmacy side.

Assert: When a pickup order is marked ready, the system automatically sends an email to the customer.

9. **The stock of drugs can be manually modified by the pharmacy, such as when a shipment of drugs already in the database is received. (inventory monitoring)**

Test Case Name: Verify manual update of drug stock

Objective: To verify that the pharmacy can change the stock of drugs manually.

Action: Log into an administrator account. On the "Inventory Monitor" page, click the pencil icon next to one of the drugs in the list, and change the stock number of that drug.

Assert: The new stock number is shown in the Browsing page.

10. The pharmacy is able to update the drug information database, such as when a new type of drug is received, or if a new effect or side effect of a drug is discovered (drug information tracking).

Test Case Name: Verify add new drugs to database

Objective: To verify that new drugs can be added to the database for purchase on the website.

Action: Log into an administrator account. On the "Inventory Monitor" page, click the "New Drug" button. Enter the drug's information, then save the information.

Assert: The drug is visible in the Inventory Monitor page, and can be searched for in the Browsing page. The appropriate information for the drug is displayed.

Test Case Name: Verify existing drugs can be edited

Objective: To verify that existing drugs' information can be modified.

Action: Log into an administrator account. On the "Inventory Monitor" page, click the pencil icon next to one of the drugs in the list. Enter new information for the drug, and save the new information.

Assert: The new information for the drug is visible in the Browsing page.
