

Integration Test Intentions – Unittest

1. test_add_order

- **Purpose:** Verify that adding an order works correctly.
- **Details:** Test /new-order for successful redirection and proper storage of order data. Clean up test data afterward.

2. test_delete_order

- **Purpose:** Verify that deleting an order works correctly.
- **Details:** Insert a test order, send a delete request to /delete-order/<id>, and ensure the order is removed from the database.

3. test_add_drug

- **Purpose:** Verify that adding a drug works correctly.
- **Details:** Test /new-drug for successful redirection and proper storage of drug data. Clean up test data afterward.

4. test_dashboard

- **Purpose:** Verify that the dashboard displays accurate data.
- **Details:** Test / for a successful response and verify that key statistics match the database.

5. test_delete_drug

- **Purpose:** Verify that deleting a drug works correctly.
- **Details:** Insert a test drug, send a delete request to /delete-drug/<id>, and ensure the drug is removed from the database.

6. test_edit_drug

- **Purpose:** Verify that editing a drug works correctly.
- **Details:** Insert a sample drug, send an edit request to /drug-edit/<id>, and replace the old data with new data. Verify that the edited drug info is displayed on all relevant pages.

7. test_edit_order

- **Purpose:** Verify that editing an order works correctly.
- **Details:** Insert a sample order, send an edit request to /edit-order/<id>, and replace the old data with new data. Verify that the edited order info is displayed on all relevant pages.

8. test_db_connection

- **Purpose:** Verify that the database can be connected correctly.
- **Details:** Create a new MongoDB client. It works if no errors or failed asserts occur.
